

Since 1996

DUTCH CUPS®

Reusable drink and food packaging, clean and safe

**The complete
Dutch Cups
circular solution**

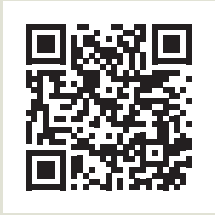

About us

Since 1996, Dutch Cups has been providing reusable hard plastic drinking cups and related products. In 2023, we began our own production and introduced a fully circular concept. Everything is handled under one roof — from production and sales to rental, cleaning, and recycling. Dutch Cups produces and sells the cups while ensuring they are recycled at the end of their lifespan. GreenCups manages rental and cleaning. Together, we offer a complete and sustainable solution.

Our range

We have everything you need for any drink and any occasion. From shot glasses to pitchers, our collection includes reusable cups, trays, and storage crates in a variety of shapes and sizes.

range

Production & printing

Dutch Cups manufactures locally using energy-efficient injection molding machines that consume 75% less energy for sustainable production. We offer a range of printing techniques: In-Mould Labeling for durable, wear-resistant designs; screen printing for full-wrap prints; and pad printing for logos or text in up to 6 colors.

Cleaning

GreenCups cleans with three advanced washing lines: two with a capacity of 20,000 cups per hour and one dedicated to crates, dishware, pitchers, and specialty glasses. Thanks to thermal disinfection and UV systems, our processes are hygienic and HACCP certified. The power of our machines contributes to a high reuse rate: up to 99% of cups are ready for use after cleaning. Only 25 ml of water per cup is needed for thorough cleaning, and with 218 solar panels, we make the process even more sustainable.

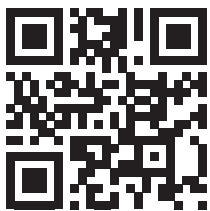

Logistics

GreenCups offers a complete logistics service for reusable drinking cups. We deliver the cups, collect them after use for cleaning, and also handle inventory management and storage. Transport is partly sustainable, using electric transport vehicles. With this service, we take care of everything, making reuse simple and hassle-free.

Complete circular solution

Dutch Cups offers a complete circular solution that makes sustainability simple. We manage the entire lifecycle of our cups: from production and logistics to cleaning and recycling. Our cups are designed for long-term use, easy to clean – both on your own or through our cleaning service – and fully recyclable. With fast delivery times, flexible solutions, and reliable service, you can always count on high-quality reusable cups. This way, you save costs and make reuse easier than ever.
